

# Automated Application Management

## APPLICATION MODERNISATION

18<sup>th</sup> June 2024 – EUC Forum, Liverpool

# Our People

Summer Meeting

**David Butler-McAllister**  
**'Automated Application Management'**

18th June, Liverpool

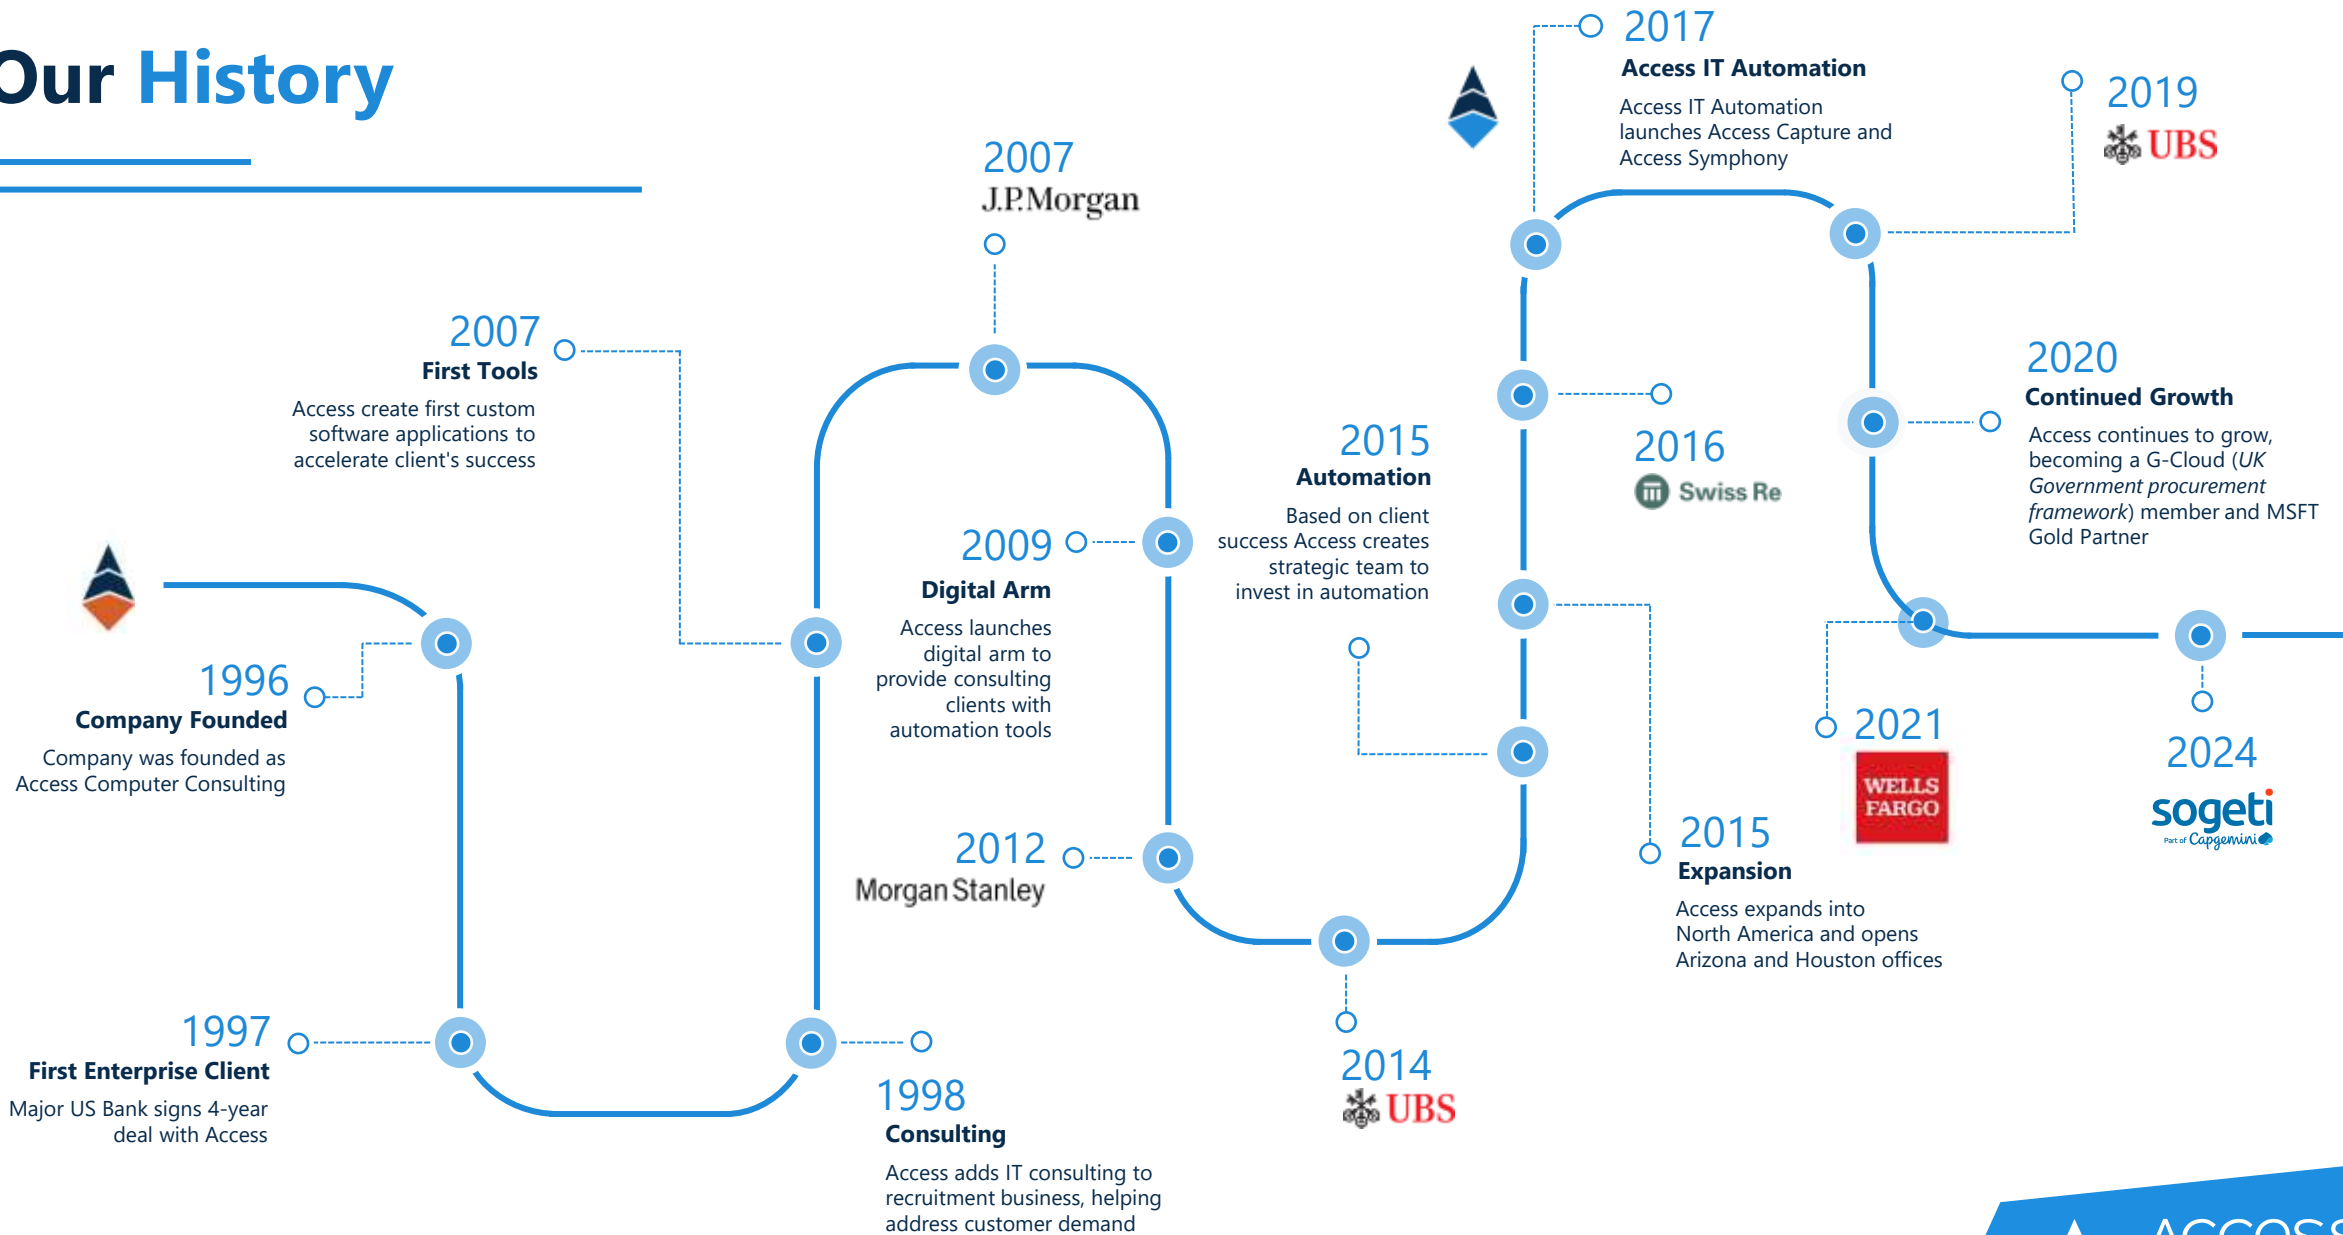

## SPEAKER BACKGROUND

- ~30 Years experience in technology
- Worked in many of the largest banks
- Started in desktop support
- Specialised in Market Data, Trade Floor support
- Over 20 years managing the technical side of application packaging, testing and deployment
- Offshored, nearshored, created follow the sun models, applied automation
- At peak managed global teams of 90+ staff creating application packages for BAU and projects

## COMPANY PEOPLE & DEMOGRAPHICS

- Access IT Automation has ~15 Staff
- There are 4 Co-Founders/Directors
- We cover Europe and North America
- We have offices in Arizona and London
- We have satellite offices in Basingstoke, Sheffield and Stoke

# Our History

# Our Product

## Automated Packaging, Testing & Publishing

An **API-driven** solution that allows enterprises to simplify and **accelerate automation** of application management end-to-end.

### How **Capture** Enables Modern Desktop

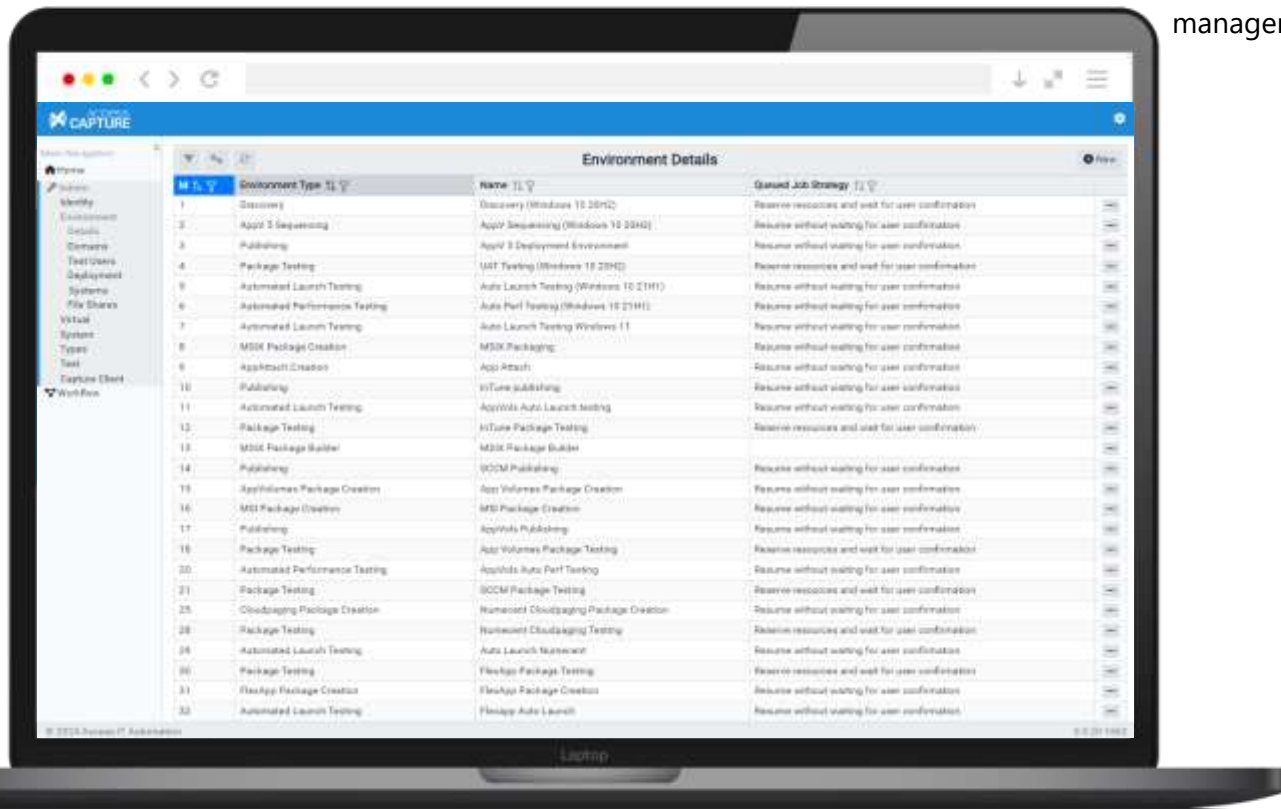

- Autonomous or interactive application packaging, testing and publishing object creation.
- Integrates into existing technology stack using APIs, meaning less hassle for you to set-up.
- Save **~80%** on outdated, manual IT methods by automating application packaging, testing and publishing end-to-end.

### What **Access Capture** Provides

- Modular API for easy automated workflow integration.
- Infrastructure agnostic through automated modern installation.
- Windows as a Service application smoke testing – all areas covered.

### Example **Results** For Our Clients

- To date **~248k** Applications packaged or tested for modern desktop using Access Capture.
- UAT time reduced by **~90%** with automated smoke testing.

# Our Case Study

- ❑ Typical Linear approach and workflow for managing desktop application change.
- ❑ Silo groups of manual application packagers, testers and deployment engineers.
- ❑ Application discovery taking days and sometimes weeks to gather source detail.
- ❑ Machine preparation not automated, product owners struggle to obtain clean VM.
- ❑ Competing priorities for BAU and Project for packaging format creation.
- ❑ Lack of ability to introduce new application package formats (MSIX, FlexApp etc.).
- ❑ No smoke testing of existing packages from one OS version to the next (Win10/11)
- ❑ No automation for application deployment object creation/migration to Intune.
- ❑ Zero Functional UAT testing, no evidence of a successful or failed UAT.
- ❑ Application performance not measured, benchmarked nor any thresholds set.

## INTRODUCTION

Legacy processes and multiple legacy application package formats, difficulty to modernise and introduce new application package formats and new deployment objects.

## SCOPE

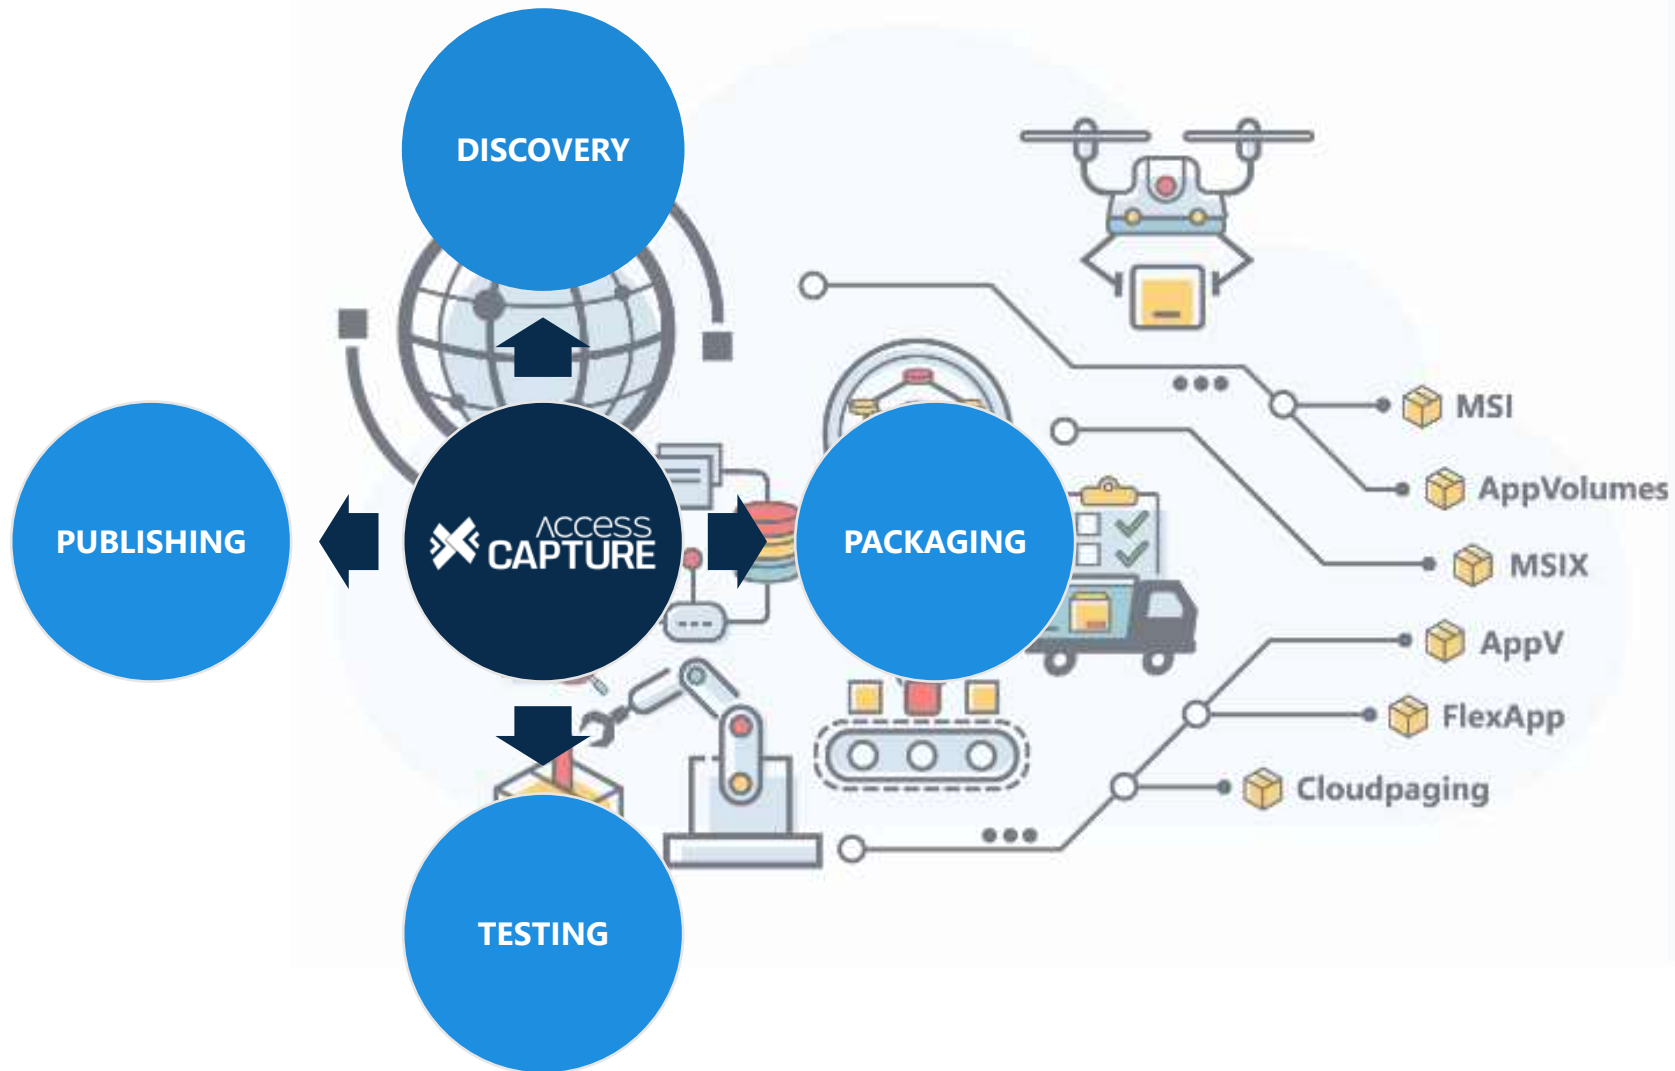

- ❑ **Client:** Large Financial Organization
- ❑ **Challenge:** Application Modernisation
- ❑ **Volume:** 12,000 Applications
- ❑ **Solution:** Automate Application Management

## BACKGROUND

**PROBLEM:** Manual processes for application packaging, testing, and deployment were time-consuming and costly. Multiple resources are involved in obtaining and enabling preparation of environments, gathering technical information, testing on more than one build and signoff.

**SOLUTION:** Streamline these processes and automate the tasks. Enabling product and app owners more control via the request process and introduce self-service capabilities.

# Our Case Study

## IMPLEMENTATION

### Data Collection:

- ✓ Access Capture AppScan automates **application suitability** data gathering.

### Integration:

- ✓ Access Capture was installed in the clients Azure using **App Services** and our APIs integrated into their CMDB, workflows and **ServiceNow**.

### App Packaging, Testing and Publishing:

- ✓ Access Capture transforms applications for **Windows 11 / 365** readiness.

## KEY BENEFITS

### Reduced Manual Effort:

- Access Capture **automates** app **packaging**, saving countless hours.

### Enhanced Efficiency:

- **Faster testing** and deployment cycles lead to increased productivity.

### Cost Savings:

- **Reduced resource** costs and minimized business disruption.

### Self-Service Capabilities:

- APIs **empower product owners**, tech teams, and end users.

# Our Case Study

## DISCOVERY

■ Automated ■ Manual

## PACKAGING

■ Automated ■ Manual

## TESTING

■ Automated ■ Manual

## PUBLISHING

■ Automated ■ Manual

- ✓ **Discovery** - Huge reduction in wasted days/weeks on gathering source detail, now self-service!
- ✓ **Packaging** - Introduce new packaging format technologies for modern and support legacy.
- ✓ **Testing** - Ability to manage smoke testing and functional UAT on both legacy and modern.
- ✓ **Publishing** - Maintain control of BAU SCCM objects and project migrations to Intune objects.

**Overall, this organization have automated ~80% of their end-to-end process by workflow integration, self-service Packaging, Testing, Publishing and VM Machine Management!**

## RESULTS

### Smooth BAU & Migrations:

- No business interruption due to unavailable systems or apps.

### Focus on Automation:

- Manual intervention only where needed.

### Cost Savings:

- Reduced manual effort translates to financial benefits.

## CONCLUSION

Include **Access Capture** as your partner for seamless Application Modernisation.

A set of **rich APIs** that not only help with application package format creation for BAU and projects, but continuous application management for smoke testing and functional UAT testing.

***"Moving to modern application package formats and new deployment technologies was easy with Access Capture due to the breadth of technologies supported and the effortless integration using their API framework"***
